

Rebate Plane \$165.00*

(Available in Gidgee. 1-1/4in wide)

Optimized to produce and clean up rabbets in the long grain. The wood sole produces less friction than brass. Can be used for shoulder plane work but care must be taken to avoid damaging the wooden sole of the plane.

Shoulder Planes \$140.00 - \$220.00*

(Available in 1/2, 3/4, 1 and 1-3/4 widths)

Used to trim the shoulders and cheeks of tenons, and to produce rabbets. A very desirable tool for furniture joints, the plane size needed is related to the size of the joints to be made. Most start with a 3/4 or 1 inch size.

Flat Sole & Curved Sole Spoke Shaves

\$170.00 - \$180.00*

(Flat for large inside radius curves and Curved for smaller inside curves)

Used to shape outside curves or radius inside curves, Spoke Shaves easily cuts against the grain with little or no tearout due to the tight mouth and middle pitch (55 degree) bedding angle of the blade. The blade/sole geometry helps the tool follow the contour of the work, making it easy to control.

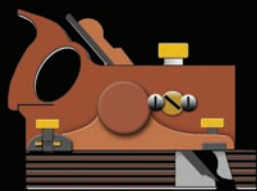

Plane Adjusting Mallet \$37.00*

Can be used on all types of wooden planes

Designed for setting and adjusting blades in wooden planes. Correct weight permits easy adjustment, and wood to wood contact prevents marring plane body.

H.N.T Gordon & Co.

A small family business producing hand crafted woodworking planes

SPECIALTY SERIES SETS AVAILABLE!

Matched specialty set of 6 planes in Striped Macassar Ebony, are finished to a much higher standard using special scrapers and very fine sandpaper.

These are the finest planes produced by H.N.T Gordon in Australia.

H.N.T Gordon & Co.

This is the current range of woodworking planes hand crafted by HNT Gordon, in Gidgee, and available through Craftsman Studio. Gidgee is a native Australian wood which is a member of the Acacia family. Wood is carefully selected, cut and dried to produce a stable and reliable tool capable of long service. An excellent choice for beginning woodworkers as well as those with advanced skills.

Planemaker, Terry Gordon, focuses on these basics:

- *Making planes that are simple-to-setup, use and maintain*
- *Using thick blades with a high blade pitch for the ultimate finish on a wide variety of woods*
- *Adding simple features like reversing the blade to convert your plane to a cabinet scraper*
- *Taking great care to dry and stabilize the wooden plane bodies to give a lifetime of Service*
- *Ensuring each plane comes Sharp and Ready-to-Use with comprehensive instructions*
- *Offering an Unconditional Guarantee against defects in materials and workmanship*

A55 Smoothing Plane \$295.00*
(10 in. long with a 2in. wide blade)

Well suited to final smoothing of any lumber surface, this 2.7 lb plane brings together the best of both wood and metal plane design. The “Norris Style” blade adjustment mechanism provides precision positioning for both depth and side-to-side movement. This smoothing plane would be a welcome addition to the tool kit of anyone working with hard and highly figured woods. The 55 degree bedding angle is an excellent choice for preventing tearout in difficult grain.

Aussie Jack Plane \$225.00*
(12 in. long with a 2in. wide blade)

Normally used for roughing work to remove the saw marks on sawn wood prior to flattening the board with a trying plane. An essential tool if you don't have a planing machine - it is well suited to general purpose planing of any lumber.

A55 Trying Plane \$355.00*
(18in. long with a 2in. wide blade)

Well suited to final smoothing of any long lumber surface or for jointing, this 4.25 lb plane brings together the best of both wood and metal plane design. The blade

is fully adjustable using a screw action mechanism, and it features comfortable handles, excellent balance, and minimal friction from the wood sole. This trying plane would be a welcome addition to the tool kit of anyone working with hard and highly figured woods. The 55 degree bedding angle is an excellent choice for preventing tearout in difficult grain.

Block Plane \$150.00*
(6-7/8 in. long with a 1-1/2 in. wide blade)

Great for general purpose planing of small pieces lumber and can be easily used in one hand. Gidgee is a native Australian wood which is a member of the Acacia family. Wood is carefully selected, cut and dried to produce a stable and reliable tool capable of long service.

Palm Smoothing Plane \$140.00*
(5in. long with a 1-1/8in. wide blade)

Perfect for final smoothing of any small timber surface.

Smoothing Plane \$195.00*
(8-1/4in. long with a 2in. wide blade)

This plane is a furniture makers work horse ideally suited to the final smoothing of any wood surface that has been made flat by a machine or longer hand plane. If you are starting out in woodwork this smoothing plane would be your first choice.

Trying Plane \$260.00*
(18in. long with a 2in. wide blade)

Used for joining long pieces of wood together (up to 6 ft. long) and flattening the resulting large wood surface. An essential tool once you have advanced to making table size projects.
