# SHAPTON GLASSSTONE SERIES

Shapton Company in Japan produces the GlassStone line of sharpening products.

GlassStones are third-generation products which benefit from continuous improvement gained through experience with waterstones made for the Japanese market and the Shapton Pro-Series sold in the US.

# DIFFERENT FROM OTHER WATERSTONES!

**Long-wearing • Require less flattening • No soaking • Cut quickly**

- Made with finely-graded ceramic cutting media which wears much more slowly than aluminum oxide and silicon carbide commonly found in man-made waterstones. This results in a similar thickness of material lasting 4-5 times longer.

- The GlassStone media is very dense and does not absorb water. This avoids maintaining them in water or waiting for them to soak prior to use.
- Shapton's binding matrix is carefully engineered to reveal sharp new cutting media for efficient stock removal while retaining some of the worn media - providing a simultaneous polishing effect. This balance results in a better edge with less work.
- Precision ground flat glass base lets you use all of the media right down to the glass. Other waterstones typically crack and break as they become thin.

## Shapton GlassStone® Waterstone Prices:

Shapton 220 grit (66.8 Micron)	Price: \$37.95
Shapton 500 grit (29.4 Micron)	Price: \$42.95
Shapton 1000 Grit (14.7 Micron)	Price: \$48.95
Shapton 2000 Grit (7.35 Micron)	Price: \$54.95
Shapton 3000 Grit (5.52 Micron)	Price: \$61.95
Shapton 4000 Grit (3.68 Micron)	Price: \$61.95
Shapton 6000 Grit (2.45 Micron)	Price: \$68.95
Shapton 8000 Grit (1.84 Micron)	Price: \$87.95
Shapton 16000 Grit (.92 Micron)	Price: \$111.95
Shapton 30000 Grit (.48 Micron)	Price: \$309.95

## SHAPTON GLASSSTONE HOLDERS, PONDS, AND GLASS DIAMOND LAPPING PLATES COMBINE TO CREATE A COMPLETE SHARPENING SYSTEM SECOND TO NONE.

### Shapton Glass Diamond Lapping Plate

Suitable for flattening waterstones from 500 to 30,000 grit. The surface of the Glass Diamond Lapping Plate is flat to

plus or minus 2.5 microns. Shapton beds 270/325 grit diamonds in glass to create a balanced finish fine enough to achieve excellent cutting results with just enough coarseness to prevent loading.

Unlike most waterstone flattening systems, the Shapton Glass Diamond Lapping Plate can be used without creating a mess or running water. It typically requires only a few passes to flatten a GlassStone and any run-off is easily contained in a Sharpening Pond. Price: \$319.95

### Shapton Stone Holder

Designed specifically for these waterstones, this Holder

provides a stable base to hold individual GlassStone grits. Made entirely of glass and rubber, it is easily rinsed off and there is nothing to rust or wear out. These work best in sets of two or three which allows the use of a progression of grits without swapping the GlassStones each time. Price: \$87.95

### Shapton Sharpening Pond

Designed specifically for the GlassStone series, it provides a stable base to hold individual GlassStone Holders. Made entirely of glass and rubber, it is easily rinsed off and will not rust or wear out. Though heavy (7.4 lbs), the extra weight is welcome, making it very stable and allowing you to focus entirely on the sharpening task. Price: \$198.95
